$\Rightarrow \quad 120R + 960R = 9720$

$\Rightarrow \quad 1080R = 9720$

and $R = \frac{9720}{1080} = 9\%$ Ans

32 Ans Total height of 4 boys $= 4 \times 160$ c.m $= 640$ c.m

and Total height of 3 boys $= 3 \times 164 = 492$ c.m

$\Rightarrow$ Height of 4th boy $= 640 - 492 = 148$ c.m.

33 Ans ① A = 12 days $\rightarrow$ 2 U/day

② A+R = 8 days $\rightarrow$ 3 U/d

$\rightarrow$ 24 units

Let L.C.M = Total work.

Subtract ① from ② we get

$$\begin{array}{rl} A+R & = 3 \\ -\ A & = 2 \\ \hline R & = 1 \text{ U/day} \end{array}$$

Time Taken by Rashi to complete 24 units work

$= 24/1 = 24$ days.

POSTAL A B C

34 Ans Length = 600 meters.

Time = 5 minutes = $5 \times 60 = 300$ seconds

Speed = D/T = $\frac{600}{300} = 2$ m/s

$= 2 \times \frac{18}{5}$ km/h $= \frac{36}{5} = 7.2$ km/h

35 Ans 15 chairs = 234

1 Chair = $\frac{234}{15}$

and 70 chairs = $\frac{234}{15} \times 70 = 1092$ R.S.

46 Ans $8059 - 7263 = x \times 40$

$\Rightarrow x = \frac{796}{40} = 19.9$.

47 Ans 13% Of $369 - x = 14$.

$\Rightarrow \frac{13}{100} \times 369 - 14 = x$.

$\Rightarrow x = \frac{4797}{100} - 14 = 47.97 - 14 = 33.97$

48 Ans Price after n years $= P\left(1 + \frac{R}{100}\right)^n$

Price after 3 years $\Rightarrow$

$= 15625\left(1 + \frac{4}{100}\right)^3$

$= 15625\left(\frac{104}{100} \times \frac{104}{100} \times \frac{104}{100}\right)$

$= \frac{15625 \times 17,576}{15625} = 17576$ Ans

POSTAL A B C

49 Ans Cost Price = 560 R.S

Loss = 10%

$SP = \frac{(100 - Loss\%)}{100} \times C.P$

$\Rightarrow SP = \frac{100-10}{100} \times 560$ and $SP = \frac{90}{100} \times 560 = 504$ Ans

50 Ans SP = 7200 R.S

Loss = 20%

$CP = \frac{100 \times SP}{100 - L\%} = \frac{100 \times 7200}{100 - 20}$

$= \frac{7200\cancel{00}}{\cancel{80}} = 9000$ R.S.

Now For gain 20%

SP = 9000 + 20% of 9000

$= 9000 + \frac{20}{100} \times 9000$

$= 9000 + 1800 = 10800$ R.S.
